## HERITAGE THERMAL BREAK SYSTEM

FEATURES	BENEFITS	IMAGES
<u>Advanced Design</u>		
<p>Two sections of the exterior and interior aluminum extrusions are connected with a composite strip</p>	<ul style="list-style-type: none"><li>• Double Color</li><li>• Maximized durability coupled with no-maintenance</li></ul>	
<u>Performance</u>		
<p>Controlling heat and noise transfer through the window frame</p>	<ul style="list-style-type: none"><li>• Higher energy performance compared to a pour and de-bridge process</li><li>• Better structural strength since another hollow cavity is added</li><li>• Connecting strips are polyamide where the coefficient of expansion is very close to aluminum</li><li>• Provides some extra insulation against noise transfer also</li></ul>
